FOREWORD

Characteristics of Physicians represents an initiative by the American Medical Association's Center for Health Services Research and Development (AMA-CHSRD) to provide comprehensive, detailed and accurate data on the entire physician population in the United States. *Characteristics of Physicians* is related to two other AMA-CHSRD publications: *Physician Distribution and Medical Licensure in the United States*, and *Medical School Alumni*. This publication differs from these in that more characteristics are detailed for smaller geopolitical units of analysis. Comprehensiveness and detail do, however, have their cost. A total of fifty-one volumes, one for each of the States and the District of Columbia, are required in order to present these data.

Successful completion of this project has required cooperation between the AMA and the Bureau of Health Manpower of the Department of Health, Education, and Welfare (DHEW). The *AMA Physician Masterfile* is the data source and considerable resources have been utilized by the AMA in developing the computer programs and designing the volumes. Contract #HRA-232-78-0163 with the Health Resources Administration of DHEW has provided the financial support needed to print and disseminate these volumes. In addition to the bound volumes, print tapes of the information contained in this report are available from the Bureau of Health Manpower. Howard V. Stambler, Director of the Division of Manpower Analysis of the Bureau of Health Manpower is the Contract Project Officer. Views or conclusions contained in this study should not be interpreted as representing the official opinion or policy of the Department of Health, Education, and Welfare.

Characteristics of Physicians was conceived by AMA-CHSRD partially in response to passage of the National Health Planning and Resources Development Act of 1974 (PL #93-641). With passage of this legislation it became apparent that planning and regulation were to become integral components of the health care system in the United States.

The distribution of physicians also has been the object of Federal legislative action for several decades. Since 1965, four separate pieces of legislation each attempting to effect a different distribution of health manpower resources have been enacted by the federal government. The most recent of these is the Health Pro-

fessions Educational Assistance Act (Public Law 95-484). Specifically, this Act ties the distribution of health manpower to the specialty distribution. Further, the loan forgiveness program is strengthened by locating in designated short-need areas. Directly related legislation is the designation of areas as shortage areas. Criteria for designating shortage areas are those areas designated as such. What are the issues and how are they resolved?

The *Characteristics of Physicians* meet some of the data requirements for market approaches to resource distribution. Assessment of specialty distributions, determination of needs and planning to ensure that they are met require detailed data on relevant physician population. Data in this report are available with the expressed permission coupled with intelligent analysis and interpretation.

Use of these data, however, is for policy makers. In addition, it is hoped that *Characteristics of Physicians* will be utilized for migration decisions, and for consultation. *Characteristics of Physicians* types of continuing medical education to be of interest to a large proportion of the region. Researchers in health sciences have also repeatedly requested this type of data provided. Therefore, *Physicians* is being widely distributed to meet the repeatedly expressed needs of groups.

The efficacy of the market mechanism for health manpower is gaining supporters. It will be before the desired incentives are in place in the health care market. Unfortunately, CHSRD is attempting to develop a system relating to health personnel that is not available and, thus, introducing a new possibility.

Lynn E. Jones
Project Director
Director, Center for Health Services Research and Development

ACKNOWLEDGEMENTS

Many persons within the American Medical Association have contributed to the success of this endeavor over its several years. The authors wish to thank Chris Theodore, Group Vice-President, Operations and Development Group, for his overall support of this project's goal from its conceptualization in 1976 to its completion. Special appreciation goes to Lynn E. Jensen, Director of the Center for Health Services Research and Development, and Project Director, for his efforts in making the project possible and in assuring the availability of resources necessary to its successful completion. Gene Roback of the AMA Survey Data Center gave helpful advice and comments during conceptualization and throughout the term of this project. Larry Schneier and Raymond Healy, from the AMA Division of Computer and Information Services, provided the programming expertise needed to complete

this project. Jim Durczak designed and executed the work for the volumes.

Within the Center, numerous individuals played significant roles during the course of the project. Wendling and Glen Misek handled a number of tasks relating to verification, progress reports, and coordinating later phases of the preparation for publication. Arsenio Oloroso provided editorial advice and oversaw numerous phases of publishing 50 separate and distinguishable state editions; Dorothy Barnette Collins assumed day-to-day administrative tasks.

Finally, the authors also wish to thank Stambler, Director, Division of Manpower, Bureau of Health Manpower, Department of Education, and Welfare, and Project Office for their efforts to make publication and distribution of the volumes possible. Special appreciation goes to Kramer, Contract Liaison, for her work in coordinating publication and dissemination activities for

Characteristics of Physicians (COP) provides detailed information on several key characteristics of physicians by their geographic distribution in the United States as of December 31, 1975. This is the first American Medical Association publication to present data for the 205 health service areas (HSA's) designated under the National Health Planning and Resources Development Act of 1974 (PL #93-641). There is a separate volume of COP for each of the fifty states and the District of Columbia. Each presents state-specific detailed data for health service areas, demographic county groups, and counties, as well as summary national data for comparative purposes. Thus, the series provides the only compatible data base on physicians across all areas and should be of significant use to practitioners and researchers in the health care industry.

The data presented here are for the physician population practicing in the United States. Detailed characteristics are presented for all physicians with known addresses in a geographic region who are professionally active. In addition, counts of physicians who are inactive or are not classified are provided on each table.

December 31, 1975 was selected as the point in time of this report for the following reasons;

- PL #93-641 was signed in January, 1975, and it was only during 1976 that significant activity was undertaken in response to this legislation. Thus, 1975 represents the last year in which the health care system was not affected by this major piece of legislation and, therefore, is the most appropriate base year for future analyses of the impact of this legislation.
- Because this represents the first statistical series of its scope, an exceptional amount of time had to be expended in the conceptualization of the project, preparation of data set, and writing of the necessary computer programs. However, plans are being developed for publication of these volumes on a more regular and current basis in the future.

The introductory material which follows provides definitions and discussions of the geographic aggregations and the specific physician characteristics tabulated. This publication's relationship to other AMA publications and to other data sources is detailed. In addition, the *American Medical Association Physician Masterfile* is described; a list of the health service areas covered in this volume is given; and a sample of the questionnaire which is sent to physicians for the purpose of updating the *AMA Physician Masterfile* is included. Twenty-one tables listed in the Table of Contents—six national tables, which are repeated in all 51 volumes, and 15 state-specific tables providing: state, HSA, county groups and county data—follow immediately. An addi-

The *Characteristics of Physicians* provides information on the geographic distribution of physicians in the United States as of December 31, 1975. Physicians who were temporarily in foreign countries are excluded from all tabulations. All data presented in this volume were developed from the *American Medical Association Physician Masterfile*.

Because the primary concern of the *Physician Masterfile* is to provide information for health planners, in most instances, it is not possible to provide care services to meet the needs of the general population. Therefore, many tables report Federal data for physicians separately. In some instances, the inclusion of Federal physicians in the data may provide an upward bias to the real picture of the services available to the general population.

Geographical Units of Analysis

Each volume of COP represents data for the United States as a whole; for the particular state; for county groups, health service areas, and counties within a state. Each physician is allocated to a specific geographic location on the basis of his or her mailing address as recorded in the *Physician Masterfile*.

The geographic subdivisions are defined in the following additional explanations. These are presented below.

County Group

The county group tables (COP-1 through COP-51) are based on the Demographic County Classification System of Marketing Management, Inc.'s Standard Metropolitan Statistical Areas (SMSA) definitions. The SMSA's serving the population size groups 6 through 9 are based on the area concept established by the Bureau of Economic Analysis in the Budget.¹ An SMSA consists of a central city of 50,000 or more population, the remainder of the county in which the central city is located; and 3) contiguous counties which are economically and socially with the central city. The group 5 includes "Potential SMSA's" as defined by Marketing Management, Inc. and are not candidates for SMSA status. Tables COP-1 through 4 include counties in the SMSA. Table A below summarizes the county group classifications.

The independent cities of Baltimore, Maryland; Alexandria, Virginia; and Chesapeake, Virginia are treated as individual counties and assigned to the county group on the basis of the city's location.

County Classification	Definition	Number of SMSA's	Number of Counties	
Total 50 States and D.C.		299	3,084	2
9	Counties in SMSA's with 5,000,000 or more inhabitants	3	16	
8	Counties in SMSA's with 1,000,000 to 4,999,999 inhabitants	34	170	
7	Counties in SMSA's with 500,000 to 999,999 inhabitants	37	128	
6	Counties in SMSA's with 50,000 to 499,999 inhabitants	184	330	
5	Counties considered potential SMSA's	41	51	
4	Non-Metropolitan counties with over 50,000 inhabitants		229	
3	Non-Metropolitan counties with 25,000 to 49,999 inhabitants		484	
2	Non-Metropolitan counties with 10,000 to 24,999 inhabitants		907	
1	Non-Metropolitan counties with under 9,999 inhabitants		769	

Note: Cities defined as independent are included in "number of counties" column.

Source: Louis J. Goodman, *Physician Distribution and Medical Licensure in the U.S., 1976* (Chicago: American Medical Association, 1977), p. 32.

dependent cities, largely those in Virginia, are incorporated into the county which encompasses it. For instance, Princess Anne County in Virginia is referred to as Virginia Beach city. In addition, Kalawao County in Hawaii is combined with Maui County and Alaska is divided into four judicial divisions with assignment into appropriate county group based on the population of each judicial division.

consist of an aggregation of counties. In some cases, however, (Alaska; Connecticut; Massachusetts of Chicago; and the Navajo, Hopi, White Mountain, San Carlos, and Papago Indian Reservations) service areas were not composites of counties but rather politico-legal boundaries. The exact political boundaries for each HSA are listed in Exhibit A.

Health Service Area

The National Health Planning and Resources Development Act of 1974 mandated the division of the U.S. into health service areas. One section of this publication, Tables 16-18, presents data on Non-Federal physicians in health service areas located entirely or partially within the state covered in this volume. States with more than one health service area within their boundaries have tables for each health service area. In states where the entire state is designated a health service area, there is, of course, only one health service area table. The existing *Masterfile* data were converted into the health service area classifications based upon the listing of health service areas published in the September 2, 1975, *Federal Register* and incorporate revisions by the Secretary of the Department of Health, Education, and

County

Selected characteristics of physicians by county for each specific state are listed in Tables 19-21. If no physician is located in a county, that county is not listed in the tables. For some states, noncounty geographic areas are treated as counties where the geographic boundaries used differ. This usage parallels the usage in the group tables. The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Hampton, Virginia; and Chesapeake, Virginia, are treated as individual counties. All other cities, largely those in Virginia, are incorporated into the county which encompasses it. Princess Anne County in Virginia is referred to as Virginia Beach city. Kalawao County in Hawaii is combined with Maui County. The four judicial divisions of Alaska

Physician Characteristics

The distributions of physicians are described in this volume in terms of a number of professional characteristics, with some individual characteristics cross-tabulated with others. Key characteristics include specialty, major professional activity, age, sex, board certification, Federal or Non-Federal employment, and state and county of graduation. The thirty-six specialty classifications used in this publication are the same as those used in other AMA publications such as the *Physician Distribution and Medical Licensure in the U.S., 1976* and are presented in Table B. A physician's specialty classification is defined as that in which he/she reports spending the largest number of practice hours. A number of county tables utilize the classification system of primary care/non-primary care specialists. Primary care physicians, for the purposes of these tables, are physicians whose specialty is general practice, family practice, internal medicine, pediatrics, and obstetrics/gynecology. Another area of general interest is specialty board certification. Certification indicates that the physician has satisfactorily completed an ex-

of the specific training required for certification by a specialty board.² The license to practice any specialty regardless of whether a physician is board certified or not does not necessarily indicate board certification. Physicians are not necessarily the specialty in which they are classified. However, over 90% of physicians are reported as board certified in the specialty in which he/she is classified.

Physicians' professional activity is reported to assess the availability of physicians for professional activity is reported by specialty and subgroups of patient care or

² "The boards are in no sense educational institutions. A certificate of a board is not to be confused with a license on any person legal qualifications to practice medicine or a specialty. The board does not limit with or limit the professional activity of a physician who do they desire to interfere in the practice of a practitioner of medicine." Liaison Committee on Medical Education, *Directory of Accredited Medical Schools in the American Medical Association*, 1976.

³ *AMA Physician Masterfile, 1976*.

practice" and "hospital based practice," either as a resident or full-time hospital staff. Non-patient care activities, such as administration, medical teaching, and medical research are also reported separately. Two of the activity categories—inactive and not classified—may need further clarification. Inactive physicians are those who have reported to the AMA via the Physician's Professional Activity questionnaire that they are either retired, semi-retired, permanently disabled, temporarily not in practice, or not active for other reasons. Physicians who are categorized as not classified are those for whom the AMA has not received any information as to their type of practice and present employment.

Definitions of the two other classifications used in describing physician characteristics are: Age as defined in terms of intervals of under 35, 35 to 44, 45 to 54, 55 to 64, 65 to 75, and 75 and over; Federal employment as defined as employment by the Veterans Administration, Military Services, the U.S. Public Health Service, and other Federal Service.

The medical education background of physicians is presented in several forms. Physicians who graduated from United States medical schools are categorized by the school of graduation and the state in which they currently are practicing medicine. In addition, physicians located in a particular county group or county within a state are cross-categorized either as having graduated from a medical school in the state, in a contiguous state, in some other state, in Canada, or outside the United States and Canada.

RELATIONSHIP TO OTHER AMERICAN MEDICAL ASSOCIATION PUBLICATIONS AND TO THE COOPERATIVE HEALTH STATISTICS SYSTEM (CHSS)

Although previous AMA publications, *Physician Distribution and Medical Licensure in the U.S.*, and *Medical School Alumni*, have reported similar information, *Characteristics of Physicians* provides more detailed information than previously available in published form.

The publication has two key features: greater detail of physicians' characteristics and greater detail with respect to geographic units. More detail is provided for age distributions, sex, and specialty board certification—for states, county groups, individual counties, and for the health service areas. Thus, this publication attempts to meet a more extensive set of data needs not met by other AMA publication series.

A data collection effort to provide information similar to the data published in *Characteristics of Physi-*

stance, *Characteristics of Physicians* provides a detailed analysis of the major practice areas of physicians. In addition, it provides summary statistics for individual HSA's and specialty distributions by county. The CHSS collection effort relies on the uniformity in quality and quantity of data. And indeed the CHSS is collecting data from only a limited number of states at this time.

INTERPRETATION OF DATA

Because of the complexity and volume of data presented in these volumes, care must be taken in their interpretation. A few examples of the necessary about the treatment of the classifications used in these tabulations are given. As mentioned previously, it was felt that for professionally active physicians would be sufficient for research and planning purposes. However, it was felt that the total number of manpower should be represented in the grand total purpose caused some problems in the main tables because of the inactive and not classified categories. These two categories are included in the tabulations but are treated differently from the type of cross-tabulation in the main tables in which specialty is cross-tabulated with professional activity, the inactive and not classified physicians are included in the total distributed by specialty. Instead, they are listed, provided at the bottom of the specialty distribution as "Inactive," "Non-classified," and "Unknown". To arrive at the total value for the inactive and not classified values should be added to the other major professional activity categories. This applies to Tables 1, 3, 6, 9, 16, and 17.

Address Unknown

Physicians with unknown addresses are listed in Table 1 for informational purposes only and are not distributed throughout the publication. The grand total. Physicians with unknown addresses are excluded from all other national and state grand total value on Table 1 except for the grand total in Table 2 plus the total in Table 3, and the total in Table 4.

Availability of Data

This concludes the description of the data in the COP series. Every effort has been made to make the most frequently requested information available in a meaningful way to most users. These data are made available in the form of

While data collection has been an AMA activity for many years, the objectives, collection techniques, and use of the data undergo constant review and have undergone considerable changes each year. A masterfile of physicians has been maintained by the Association since 1906. However, in the early days of its existence, the *Masterfile* was primarily a listing of physicians maintained as a record-keeping device for membership and mailing purposes. Decisions were made on a day-to-day basis without a unified approach and without regard as to what these decisions would mean in terms of statistical methods and interpretation of the data.

As research activities within the Association became more sophisticated, the complexity of data requirements increased. The *Masterfile* was, therefore, expanded and improved to meet these requirements. Today, the *AMA Physician Masterfile* is the most comprehensive and complete source of physician data in the United States. It includes information on every physician in the country, members and non-members of the Association, on graduates of American medical schools who are temporarily practicing overseas, and graduates of foreign medical schools who are in the United States and meet U.S. education standards for primary recognition as physicians. Thus, all physicians comprising the total physician manpower pool are included on the *AMA Physician Masterfile*.⁶

A file is started on each individual upon entry into medical school or, in the case of foreign and Canadian graduates, upon entry into the U.S. As a physician's training and career develops, additional information is added to the file—e.g., internship and residency training, licensure board certification, professional affiliations, and other characteristics. Although such characteristics change over time, they are not subject to constant change. These types of characteristics are included in the "historical" portion of the *Masterfile*. In addition, there is the "current professional activities" portion of each physician's record that identifies his current address, professional activity, specialties, and employment status. By definition, this current portion of the *Masterfile* is subject to constant change and must be updated through intense monitoring techniques.

Prior to 1966, physician classification by specialty, activity, and employment was made through the Classification of Professional Activities (CPA) system, which was based upon a "private practice/not in private practice" concept. Data were collected under this system via a short postcard-type questionnaire en-

⁵ This section draws heavily from: Goodman, L.J. *Physician Distribution and Medical Licensure in the U.S., 1976*. Chicago: American Medical Association, 1977.

⁶ For discussion of validation studies conducted on the *AMA Physician Masterfile*, see Goodman, L.J., and Eisenberg, B.S., "The

The new questionnaire was first used in 1968 in the census survey of 317,000 physicians. Each physician was asked to indicate the average number of hours worked per typical week in several areas within three categories—Professional Activities, Specialization, and Present Employment Status. The use of a “time spent” device gave the physician a criterion upon which to classify his practice, and the confusion between and within the activity and employer categories was minimized. After five mailings a usable response of 87.4 percent was attained.

All returned questionnaires were passed through a series of clerical editing procedures and a quality control checkpoint. They were then keypunched and the data processed through a series of computer programs which assigned the activity, specialty, and employment classification to each physician record.

A complete census was scheduled to be conducted every three years. However, in order to verify the information gathered in 1968 under the new system, a complete census of 325,000 physicians was made again in 1969. The questionnaire, structurally the same as that of 1968, contained the physician's 1968 response with a column provided for corrections or changes. A usable response rate of 86.8 percent was attained. Analysis of the two sets of data revealed that the data collected in 1969 were consistent with that of 1968, therefore, confirming that the questionnaire used to gather the data was a reliable survey instrument. The most recent complete census, for the purpose of this project, was conducted in 1973. The 1973 questionnaire is identical to that used in 1969 except for the addition of a section requesting address and other general information. The usable response rate was consistent at 86.8 percent. A copy of the questionnaire used in the 1973 census is presented in Exhibit B.

Between census years, a comprehensive computerized weekly updating system keeps the *Masterfile* current. Each physician's record is dated to reflect the most recent change, which may be obtained for AMA mailings, publications, company mailings, physician correspondence, or hospitals, government agencies, medical schools, medical agencies, medical societies, specialty boards, and licensing agencies. Any indication of a change in professional status or address triggers a questionnaire similar to the one used in the 1973 census. The physician is placed on a “change” file while follow-up mailings are made to raise the response rate. In 1975, approximately 3,500 weekly change questionnaires were mailed per week.

As an additional check on the *Masterfile* between census years, the AMA's Center for Health Services Research and Development conducts year-end computer audits. A comparison of 1972 and 1973 year-end data shows the same consistency as the complete census data of 1968 and 1969. A similar comparison was conducted at the completion of the 1977 census. The reliability of

Graduates, as well as reports on AMA physician manpower, women physicians, and society statistics.

While the data collected for the Record of Professional Activities questionnaire represent input to the *AMA Physician Masterfile*, data from other sources are also incorporated. These other sources include:

- *Medical Schools*—Provides data on year of graduation, birthplace, and professional appointments.
- *State Licensing Boards*—Provides list of physicians.
- *Hospitals*—Provides information on residents, birthplace, and foreign graduates in training.
- *Department of Defense*—Provides data on physicians in government service.
- *American Specialty Boards*—Provides board certification of physicians.
- *Medical Societies*—Provides data on specialty, state, and county societies.
- *Educational Council for Foreign Graduates*—Provides data on foreign graduates.

While many sources provide data for the *Masterfile*, data are also often extracted from the *Masterfile* for use by these agencies. In addition, the *Masterfile* is used by the National Center for Health Statistics; the Office of Emergency Preparedness; the Office of the President of the U.S.; the Secretary of DHEW; the National Institute of Health; various other federal, state, and local government agencies; numerous universities and medical schools; county, and specialty medical societies; pharmaceutical industry; and ten addressing centers.

EXHIBIT A:

HEALTH SERVICE AREA DESIGN JULY 1, 1976

The National Health Planning and Resources Development Act of 1974 (PL #93-641) requires that health service areas be established throughout the United States. The legislation specified that each health service area must meet the following requirements:

1. The area must be a rational geographic region containing a comprehensive range of health services, and of a character suitable for health planning and development of health resources.

⁷Committee on Interstate and Foreign Commerce, *Policy, Health Planning and Resources Development Act of 1974*, H.R. 93-641, 93rd Congress, 1st Session, 1974.

3. Upon establishment, the area must have a population between 500,000 and three million, with the following exceptions: the population may exceed three million if the area includes a standard metropolitan statistical area (as determined by the Office of Management and Budget) with a population of more than three million persons; and the population of an area may be less than 500,000 in unusual circumstances, but not less than 200,000 except in highly unusual circumstances if the Governor of each state in which the area is located determines, with the approval of the Secretary, that the area meets the other requirements of this subsection. "Unusual" and "highly unusual" circumstances are to be defined by the Secretary in regulations.

4. To the maximum extent feasible, the boundaries of the health service area must be coordinated with the boundaries of Professional Standards Review Organizations, existing regional planning areas, and State planning and administrative areas.

Each standard metropolitan statistical area (SMSA) must be entirely contained within the boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain only part of the SMSA in order to meet the other requirements of this subsection.

The 205 Health Service Areas designated in July 1976 * are the definitions used in this publication. A listing of the HSA's and the counties, towns, or cities comprising them for the state treated in this volume follows below.

PROFESSIONAL ACTIVITIES

DIRECTORY OF PHYSICIANS

Center for Health Services Research and Development

AMERICAN MEDICAL ASSOCIATION

535 N. Dearborn Street

Chicago, Illinois 60610

Dear Doctor:

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the *1973 AMA DIRECTORY*. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, *NO information from your record will be released* to any organization for the purpose of developing independent physician data files.

Thank you.

Instructions

1. Please answer every question on the basis of your current activities.
2. **Indicate any changes.** Information which you provided previously has been printed in this form. Please complete unanswered sections and make discrete changes where applicable.
3. Upon completion, return the questionnaire at your earliest possible convenience, using the preaddressed envelope.

Contents

The questionnaire is divided into four sections:

- I. Professional Activities—the types of activities in which each physician spends the most time during an average week.
- II. Specialization—the time physicians spend in their major fields of specialization.
- III. Present Employment Status—the number of hours per average week spent under various practice arrangements, by type of practice organization or employer.

I. PROFESSIONAL ACTIVITIES

Please describe your PRESENT professional activities by indicating the average number of hours spent during a typical week. Please answer EVERY question 1-8. If you do not spend any hours on any particular activity below, so indicate by entering zero (0) hours in appropriate spacing.

1. How many hours per week do you currently spend in a full-time TRAINING program as an intern or resident? Indicate whether you are a(n)

1 ☐ INTERN 2 ☐ RESIDENT.

(If you checked either of the boxes, please proceed to questions 6, 7, and 8 and answer, if applicable.)

2. How many hours per week do you spend in PRACTICE INVOLVING DIRECT CARE OF PATIENTS? Direct care means seeing patients; however, it also includes patient services by such physicians as pathologists and radiologists.

Exclude time spent in training, teaching, or research. Include travel time and time spent on record keeping and other office work connected with your patients.

3. How many hours per week do you spend on ADMINISTRATIVE ACTIVITIES, AS A SALARIED STAFF MEMBER OR EXECUTIVE OF AN ORGANIZATION?

Exclude time spent on record keeping and office work connected with management of your own practice. Include activities connected with the administration or staff committees of a hospital or other health facility or agency, clinic or group, or any other organization by which you may be salaried as an executive or staff member.

4. How many hours per week do you spend on MEDICAL TEACHING?

Include hours spent in teaching as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational institutions.

- a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.

In view of possible overlap of hours spent in teaching and research, please do not double-count such hours, but report them instead in the most applicable category.

5. How many hours per week do you spend on MEDICAL RESEARCH?

All phases of investigating medical problems regardless of source of funds for such research.

- a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.

6. How many hours per week do you spend on any OTHER medical activities (not listed above) INVOLVING DIRECT CARE OF patients?

7. How many hours per week do you spend on any OTHER medical activities (not listed above) NOT INVOLVING direct care of patients?

8. About how many hours per week do you spend in ALL PROFESSIONAL ACTIVITIES? Total of questions 1 through 7 (exclude 4a and 5a)

If you indicated "zero" on question 8, or if none of the above categories apply to you, please answer question 9.

9. Are you: 1 ☐ RETIRED 2 ☐ SEMI-RETIRED

3 ☐ PERMANENTLY DISABLED

Primary		_____	_____
Secondary		_____	_____
Third		_____	_____

III. PRESENT EMPLOYMENT STATUS

Please indicate the current number of hours spent per week for the following types of employers. (Note: employer should **NOT** be confused with physical location of where your hours are spent.) Please answer question 1-10. If you do not spend any hours for any one of the following employers, so indicate by entering zero (0) hours.

		HOURS	Prior Census
1. Self: "solo" practice		HRS.	1
2. Self: partnership practice		HRS.	2
3. Arrangement with other physician(s): non-group		HRS.	3
4. Group practice		HRS.	4
5. MEDICAL SCHOOL (or parent university)		HRS.	5
6. NON-GOVERNMENTAL hospital		HRS.	6

		HRS.	14

If the address printed at right is NOT correct, please make appropriate

IV. ADDRESS AND GENERAL INFORMATION

1. Is the machine printed address BELOW:

- a. *Both* your Professional and Home Address? ☐ 13
(If so, proceed directly to Question 3.)
- b. Your *Professional Address only*? . . .
(If so, please enter your *HOME* address in space following (c) below and proceed to Question 2.) ☐ 14
- c. Your *Home Address only*?
(If so, please enter your *PROFESSIONAL* address in following space.) ☐ 15

14-45
(STREET)
44-73
(CITY, STATE, ZIP)

2. Please indicate at which address you wish to receive *medically related* material:

Professional Address..... ☐ 13

Home Address..... ☐ 14

3. Please indicate below the county and state of your HIGH SCHOOL graduation if in the United States or Possessions.

(County) 15-17

(State) 18-19

20-21

If already provided, please verify following:

(County)

(State)

GROUP NAME

ADDRESS

CITY-STATE-ZIP

4. Please supply the following information:

Social Security No.: 22-32

Age: 33-35

Sex: ☐ 36 Male ☐ 37 Female

Race: ☐ 38 White ☐ 39 Black ☐ 40-41 Other

List of Designated Specialty Codes

AM	Aerospace Medicine
A	Allergy
AN	Anesthesiology
BE	Broncho-Esophagology
CD	Cardiovascular Diseases
D	Dermatology
DIA	Diabetes
EM	Emergency Medicine
END	Endocrinology
FP	Family Practice
GE	Gastroenterology
GP	General Practice
GPM	General Preventive Medicine
GER	Geriatrics
GYN	Gynecology
HEM	Hematology
HYP	Hypnosis
ID	Infectious Diseases
IM	Internal Medicine
LAR	Laryngology
LM	Legal Medicine
ND	Neoplastic Diseases
NEP	Nephrology
N	Neurology
CHN	Neurology, Child
NA	Neuropathology
NM	Nuclear Medicine
NTR	Nutrition
OBS	Obstetrics
OBG	Obstetrics and Gynecology
OM	Occupational Medicine
OPH	Ophthalmology
OT	Otology
OTO	Otorhinolaryngology
PTH	Pathology
CLP	Pathology, Clinical
FOP	Pathology, Forensic
PD	Pediatrics
PDA	Pediatrics, Allergy
PDC	Pediatrics, Cardiology
PA	Pharmacology, Clinical
PM	Physical Medicine
P	Psychiatry
CHP	Psychiatry, Child
PYA	Psychoanalysis
PYM	Psychosomatic Medicine
PH	Public Health
PUD	Pulmonary Disease
R	Radiology
DR	Radiology, Diagnostic
PDR	Radiology, Pediatric
TR	Radiology, Therapeutic
RHU	Rheumatology
RHI	Rhinology
ABS	Surgery, Abdominal
CDS	Surgery, Cardiovascular
CRS	Surgery, Colon and Rectum
GS	Surgery, General
HS	Surgery, Hand
HNS	Surgery, Head and Neck
NS	Surgery, Neurological
ORS	Surgery, Orthopedic
PDS	Surgery, Pediatric
PS	Surgery, Plastic
TS	Surgery, Thoracic
TRS	Surgery, Traumatic
U	Surgery, Urologic
	In addition to the above specialties are used the following designations:
OS	Other, i.e., physician who does not have a specialty other than that appearing above.
US	Unspecified, i.e., physician who did not specify a specialty
